Improvements in Stormwater Management Inspection

and Maintenance

**Board of Directors** 

May 28, 2021

Steve Auger,

Coordinator, Stormwater Management

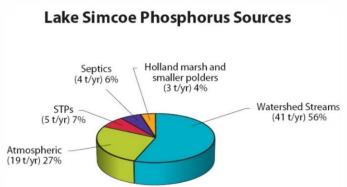

## Why is effective Stormwater Management so important

- Reduced flooding & associated impacts, liability...
- Reduce phosphorus loads.
- Tributary health.
- Adapting to climate change.
- Increased growth: cumulative effects.

## **Evolution of Stormwater Management**

#### Prior to 1980s

- No / minimal SWM required
- Direct discharge to rivers and creeks

#### Early 1980's

- Quantity control
- Rapid conveyance to receiver or facility

### Early 1990's

- Quality and quantity control
- Rapid conveyance to wet ponds

#### 2020s...

Integrated grey and green solutions to achieve required performance

# Effective Stormwater Management Performance is Achieved by...

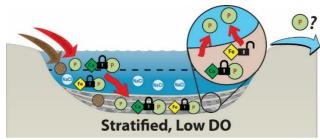

### Stormwater Inspection and maintenance challenges

#### Ponds:

- Legacy of poorly maintained features
- Lack of routine Inspection and Maintenance
- Research shows many factors effecting performance e.g.
  - Variable sedimentation rates
  - Stratification: temperature & salinity
  - Persistent turbidity
  - Design vs build

#### Low Impact Development features:

- Relatively new and evolving
- Diversity of types → diversity of approaches, skills & recourses needed

## What does this mean from a municipal perspective?

- Determining who is responsible for what aspects of stormwater management maintenance.
- Do municipal staff have the appropriate knowledge and skills.
- Funding costly and changing from large capital to blend routine/capital.
- Asset inventory for all types of stormwater management facilities (ponds, Low Impact Development features) needs resources for upkeep and action.

## Supporting the evolution of Municipal Stormwater Management Inspection and Maintenance

#### Our goals

- Assist municipalities achieve cost effective, prioritized, quality inspection and maintenance.
- Help prepare for system-wide compliance.

#### How

- Technical advisory support
- Applied training
- Resources and tools
- Professional services
- Applied research

### LID Municipal Inspect. & Maintenance Working Group

- LSRCA with funding partnership support from MECP established this group in 2019.
- Comprised of municipal managers overseeing inspection & maintenance programs.
- Identify challenges and develop solutions to support all municipalities.
- Dissemination of successful best practices shared between municipalities.

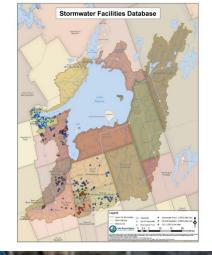

## **Resources and Tools**

- 'Lake Simcoe Watershed Municipal Stormwater Management Database' in Citywide – resourcing and upkeep.
- Applied inspection and maintenance municipal training (ponds, LIDs).
- Guide for prioritization methodology, inspection forms via database, procurement templates, costing tools for annual planning.

## Town of Aurora Inspection & Maintenance Prioritization Services

- Partnership with Aurora with services scoped to understand the status and maintenance needs of ponds and Low Impact Development features.
- First-hand experience applying methods and tools we have developed.
- Lessons learned will benefit other
  Lake Simcoe Watershed municipalities
  and beyond.

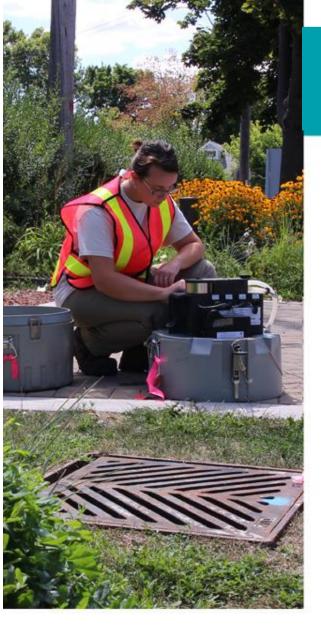

## Significant benefits...

- Many benefits of improved inspection and maintenance include...
  - extending service life of ponds & LIDs,
  - asset management improvements,
  - alignment with new MECP Linear Infrastructure Permissions Regulation,
  - Compliance also addressed insurance risk, climate change.
  - Multiple environmental benefits including Phosphorus reduction.
  - Broader uptake throughout Ontario.

## A STEP Partnership...

STEP is a multi-agency initiative developed to support broader implementation of sustainable technologies and practices within a Canadian context.

The water component of STEP is a conservation authority collaborative. Current partners are:

#### **Key Focus Areas:**

- Low Impact Development
- Erosion and Sediment Control
- Road Salt Management
- Natural Features Restoration

## Thank You! Questions...
